

SENSIT P-Guide App (custom)

navigation app to find available parking spaces

Key features:

- ✓ custom parking app for cities, municipalities and companies
- ✓ guidance to on- and off-street parking facilities based on real-time data
- ✓ 3rd party data integration
- ✓ last-mile check on available parking spaces
- ✓ SENSIT Electronic Parking License integration
- ✓ car Finder option

Nedap's SENSIT P-Guide App enables cities, municipalities and companies to easily provide motorists with real-time parking information.

The app, which can be fully customized to fit (city) marketing needs, helps motorists to easily find and navigate to available parking spaces, both on- and off-street. The app is specifically designed to offer parking guidance information in smaller parking projects.

Custom parking app

The P-Guide App can be completely customized by cities, municipalities and companies to be fitted within their (city) marketing concepts. By adjusting colors, logo's, the app name and content, cities, municipalities and companies can easily create their own iOS and Android smart parking navigation app, without having to build their own app. Available parking data (on- and off-street) can be easily integrated and managed.

Parking sensor data

The app uses real-time data from Nedap's SENSIT parking sensors and (optionally) parking garages. By leveraging the smartphone's existing navigation apps (e.g. Google Maps, TomTom, Waze) and parking payment apps (e.g. Parkmobile, PayByPhone), the app creates an optimal parking experience. The P-Guide App is available for iOS and Android devices.

Parking navigation

Besides the app's "Park Now" function, that instantly finds the nearest available parking space near the current location of the driver, the app enables motorists to plan their journey from their starting point (A) towards an available parking space (P) at the final destination (B). From A to P to B. Additional functions like the possibility to integrate SENSIT Electronic Parking Licenses and the Car Finder option are easily accessible through the app.

Last-mile check

When having a long journey ahead, chances are that the available parking space becomes occupied right before the driver arrives. Therefore, the app automatically performs a last mile check on the availability of the parking space. The SENSIT P-Guide App provides alternative available parking spaces whenever the initial chosen parking space becomes occupied.

Technical information	SENSIT P-Guide App (custom)
Part number	8026378 SENSIT P-Guide App (custom)
Supported operating systems	iOS (iOS 8>), Android (Android 4.1>)
Document version number	2.1
